De l'ébauche à la super finition

Les différents rayons et brise-copeaux des plaquettes du programme ISO permettent de réaliser toutes les opérations, de l'ébauche à la super finition.

Dalla sgrossatura alla superfinitura

I diversi raggi e rompitruciolo degli inserti consento di eseguire tutte le operazioni, dalla sgrossatura alla superfinitura.

Brise-copeaux rectifiés ou bruts: toujours le choix le plus approprié

Le programme ISO propose des plaquettes avec brise-copeaux frittés et rectifiés ; ce qui permet toujours de trouver la meilleure solution pour l'usinage des différentes matières.

Rompitrucioli rettificati o grezzi: sempre la scelta più appropriata

Il programma ISO offre inserti con rompitruciolo sinterizzato e rettificato; in modo da trovare sempre la soluzione migliore per la lavorazione di diversi materiali.

Tournage extérieur et intérieur

Le programme ISO propose aussi bien des porte-outils pour le tournage extérieur que des barres d'alesage en métal dur à partir de Ø8 mm pour le tournage intérieur.

Tornitura esterna e interna

Il programma ISO offre sia portautensili per la tornitura esterna che barre di alesatura in metallo duro a partire da Ø8 mm per la lavorazione interna.

CERMET

Finition avec plaquettes cermet

Le programme ISO propose différentes plaquettes en cermet qui sont particulièrement recommandées pour les opérations de finition nécessitant une très haute qualité d'état de surface dans les aciers au carbone et faiblement alliés.

Finitura con inserti in cermet

Il programma ISO offre diversi inserti in cermet, particolarmente indicati per le operazioni di finitura che richiedono una qualità superficiale molto elevata negli acciai al carbonio e basso legati.
